

O-Ring Replacement

The handheld filler has a small o-ring that seals the tip of the CO₂ cartridge to the regulator. This o-ring can fall out—especially if the cartridge is unscrewed before it is empty, as the resulting blast of CO₂ can blow the o-ring out.

If this should happen, a replacement o-ring should be pressed into the depression where the tip of the CO₂ cartridge fits. **Make sure there is not already an o-ring there!**
